## INFORMATION TECHNOLOGY - NETWORK MANAGEMENT

**Contact(s):** Brian Crump

The Network Management curriculum prepares individuals for employment supporting network infrastructure environments. Students will learn how to use technologies to provide reliable transmission and delivery of data, voice, image, and video communications in business, industry, and education.

Coursework includes design, installation, configuration, and management of network infrastructure technologies and network operating systems. Emphasis is placed on the implementation and management of network software and the implementation and management of hardware such as switches and routers.

Graduates may find employment in entry-level jobs as local area network managers, network operators, network analysts, and network technicians. Graduates may also be qualified to take certification examinations for various network industry certifications, depending on their local program.

### Learning Outcomes

Upon completion of this program, students will be able to:

- Design an addressing scheme for a small to medium TCP/IP network.
- Configure, manage, and secure network equipment and services.
- Configure and manage client/server operating systems and related programs.
- Configure and manage virtual machine environments.
- Evaluate industry standard security practices
